1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3, 5, 7, 8, 10-12, 14, 15 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Joichi of JP7324161.

Joichi, in example 1 of page 4, shows a polyurethane made from polymethylene polyphenylene polyisocyanate (crude MDI, in abstract) and a polyether polyol having a molecular weight of 9350 and a functionality of 3 (see abstract and col. 4, line 19) and a polyether mono-ol having a molecular weight of 7000 and made at an NCO/OH ratio of about 1. The only additive is about 0.2 wt. % of a catalyst, and the monool reacts with about 32 % of the NCO groups. The properties of the polyurethane would be inherent because the polyurethane is the same as the invention.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Joichi.

5. Joichi discloses the invention of the claims (see above), but differs from this claim in example one by showing only about 0.03 hard block ratio.

6. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have a higher amount of hard block ratio by using a mono-ol of lower molecular weight. Joichi discloses using a mono-ol of molecular weight of 500-100,000 (see abstract). In the event that lower molecular weight polyols are used, the hard block content would increase. Joichi discloses a range of mono-ol molecular weight that would made the amount of hard block content overlap with claim 18.

7. Claims 2, 4, 6, 9, 13, 16 and 19 are objected to for depending on a rejected claim.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rachel F. Gorr whose telephone number is 571-272-1072. The examiner can normally be reached on Mon., Tues., Thurs., Fri., from 7:00 AM to 5:30 PM.
